DISEASE: DEFECTS IN MYK ARE THE CAUSE OF MEVALONICACIDURIA.
AN ACCUMULATION OF MEVALONIC ACID WHICH CAUSE A VARIETY OF
SYMPTOMS SUCH AS PSYCHOMOTOR RETARDATION, DYSMORPHIC FEATURE
CATARACTS, HEPATOSPLENOMEGALY, LYMPHADENOPATHY, ANEMIA, HYPO
MYOPATHY, AND ATAXIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DISEASE: DEFECTS IN MVK ARE THE CAUSE OF HYPERIMMUNOGLOBULINEMIA AND PERIODIC FEVER SYNDROME (HIDS); AN AUTOSOMAL RECESSIVE DISEAS CHARACTERIZED BY RECURRENT EPIDOSES OF UNEXPLAINED HIGH FEVER ASSOCIATED MITH SKIN RASH, DIARRHEA, ADENOPATHY (SWOLLEN, TENDER LYMPH NODES), AND ATHRALGIAS AND/OR ARTHRITIS. CONCENTRATION OF IGD, AND OFTEN IGA, ARE ABOVE NORMAL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               phosphomevalonate.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a nucleic acid (I, ABL60244) that encodes a plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agent that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK.
                                                                                                             Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              strains useful for identification and validation of gene products as targets for therapeutic agents, for creating a collection of identifial essential genes, and screening assays for the discovery of new drugs. The invention provides the GRACE (gene replacement and conditional expression) method for the construction of mutant organisms referred as GRACE strains of the organism. The invention can be applied to any organism, particularly a pathogenic fungus e.g. Candida albicans, Aspergillus funigatus and Cryptococcus neoformans. The methods are useful to identify agents that may be used in the treatment of fungal infections. AAUI5053-AAUI5113 represent proteins encoded by C. albican

                                                                                                                                                                                                                                                                                                                         The present sequence is phosphomevalonate kinase (PMK; ERG8) protein from Candida albicans. The ERG8 protein is useful in an assay for identifying compounds that inhibit phosphomevalonate kinase (PMK) activity. These inhibitors are useful as anti-fungal agents. The ERG8 DNA and protein are also useful as reagents for diagnosing C. albicans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

PR

The present invention

polypeptides involved

describes plant polynucleotides encoding in the production and modification of isoprenoids, steroid compounds. The polynucleotides are used

such as terpenoid and

Claim 26; Page 159; 164pp; English.

applications, manipulating isoprenoid pathways or isoprenoid composition may, for example, affect plant development, pest resistance, and the value of extractives (e.g. pinene and myrcene). The ubiquitous and

varied roles of isoprenoids make the polynucleotides attractive

e e

6

targets

for biotechnical applications in

in genome mapping, in physical mapping and in positional cloning of genes. The polynucleotides and polypeptides are useful in forestry and agriculture for manipulation of isoprencia metabolism, in medicine for therapeutic effects, including direct application in diseased organisms or indirect application by transgenic organisms and in fermentation and chemical processing industries involving isoprenoids. In plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                         The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The attisense nucleic acids can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-MAR-2000;
